

What is Claimed is:

1. A golf club comprising:

a hand grip;

a club head, and

5 a club body between the hand grip and the club head; and a cross section area of the club body including

a front portion having a first inclined and a second inclined surfaces that define a front cusp in a front connection end of said first and said second inclined surfaces;

10 a rear portion having a third inclined surface and a fourth inclined surface that define a rear cusp at a rear connecting end of the third and fourth inclined surfaces; and

a middle section between the first portion and the second portion; the middle section being curved inwards.

15 2. The golf club as claimed in claim 1, wherein in a direction from the handgrip to the club head, the club body has at least one reduced segment having a smaller size than other portion thereof, and a shoulder is formed between each reduced segment and an adjacent other portion of the golf club.
